Art Unit: 1652

Claims 19-31 have been canceled. Claims 1-18 and newly presented Claim 32 are still at issue and are present for examination.

Claim 32 of this application has been presented by the applicant as corresponding to a proposed count to provoke an interference with U.S. Patent No. 5,928,928. This claim is not patentable to the applicant because it fails to comply with the written description requirements of 35 USC 112 and is anticipated as discussed herein.

An interference cannot be initiated since a prerequisite for interference under 37 CFR 1.606 is that the claim be patentable to the applicant subject to a judgement in the interference.

Claim 32 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

These claims are directed to a genus of DNA molecules comprising any DNA fragment which hybridizes to SEQ ID NO:1 under stringent conditions (which are defined in the specification on page 4 lines 24-30).

The specification does not contain any disclosure of the function of all DNA sequences which hybridizes to SEQ ID NO:1

Application/Control Number: 08/663,618 Page 3

Art Unit: 1652

under stringent condition. The genus of DNAs that comprise these above DNA molecules is a large variable genus with the potentiality of encoding many different proteins. Therefore, many functionally unrelated DNAs are encompassed within the scope of these claims, including partial DNA sequences. The specification discloses only two species of the claimed genus which are insufficient to put one of skill in the art in possession of the attributes and features of all species within the claimed genus. Therefore, one skilled in the art cannot reasonably conclude that the applicant had possession of the claimed invention at the time the instant application was filed.

Applicant is referred to the revised interim guidelines concerning compliance with the written description requirement of U.S.C. 112, first paragraph, published in the Official Gazette and also available at www.uspto.gov.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 32 is rejected under 35 U.S.C. 102(b) as being anticipated by GenBank entry T94579.

Application/Control Number: 08/663,618 Page 4

Art Unit: 1652

GenBank entry T94579 discloses a polynucleotide fragment with 95% identity to nucleotides 1217-1624 of SEQ ID NO:1 (see attached alignment). This polynucleotide would clearly hybridize under stringent conditions to SEQ ID NO:1.

Claims 1-18 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rebecca Prouty, Ph.D. whose telephone number is (703) 308-4000. The examiner can normally be reached on Monday-Friday from 8:30 to 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ponnathapu Achutamurthy, can be reached at (703) 308-3804. The fax phone number for this Group is (703) 308-4242.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0196.
